West Divide Street Water Main Replacement

Type of Work:

The City of Bowman has scheduled a water main replacement project on West Divide Street. The project limits are along Divide Street between 2nd Avenue West to 8th Avenue West. The work will include removing asphalt surfacing, open cut excavation, installation of new water main and replacing/adding valves and fire hydrants.

Who is Authorizing Work:

City of Bowman City Commission and Water Department.

Dates of Work:

Expected from May 2nd to June 17th, 2016.

Construction Hours:

Crews will be working between the hours of 7:30 a.m. and 6:00 p.m.

Water Service:

Service interruptions are inevitable with this type of construction and typically last 3 to 4 hours. Residents who wish to be notified in advance of any planned water service interruptions during the construction period please contact City Hall. The City understands that interruptions in service are inconvenient and will try to reinstate service as quickly as possible, but ask that residence understand underground construction has many unknown variables that may delay the reinstatement. Should the main require shutdown through the night a temporary service will be installed to the homes and businesses that are affected.

Traffic Impact:

There may be periodic lane closures and construction and detour signs will be installed to provide an alternative route. Please obey all temporary traffic signs and drive safely around the construction site and crews. Parking in the construction zone is prohibited during the work. Underground construction requires the use of large equipment and trucks; these types of equipment are hard to see in all direction which makes the work zone very dangerous. The City asks that you refrain from entering the construction site even though it may seem as all equipment is stationary.

Finding an alternate route while construction is in progress will be your best option to avoid timely delays, mud, chips, etc.

Thank you for your patience and cooperation during this project!
